

IAS improves DispatchManager product

Thursday, November 17, 2011

IAS said it has unveiled extensions to its IAS DispatchManager product that automates the container haulage work order process from creation to proof of delivery. The three new IAS modules are designed to help ocean carriers, cargo owners, third-party logistics providers, and motor carriers connect and collaborate more effectively. They are: DispatchOptimizer which helps users identify street turn intermodal transport hauls, reducing costs associated with inefficient dual deadheading..
