Apex Maritime adopts IAS Dispatch suite of intermodal transportation solutions 30/May/2013

International Asset Systems (IAS), a provider of cloud and integrated technologies that connect intermodal trading partners, has announced that Apex Maritime, an NVOCC carrying imports from Asia to the US, has selected IAS Dispatch as their work order management solution.

Apex will use the full IAS Dispatch suite to gain first and last mile visibility within their transportation network, to enhance customer service, and to improve operational efficiencies. "IAS helps both large and small freight forwarders, 3PLs, and ocean carriers to better manage intermodal transportation in order to increase efficiency and profitability," said Mike Nedrow, Vice President of Sales at IAS.

He added, "The best-in-class InterAsset platform will provide one-to-many connectivity to Apex's trading partner network and IAS Dispatch will provide monetary savings, transparency of costs and motor carrier performance, and the first and last mile visibility that their customers require."

IAS Dispatch is an integrated suite of solutions that brings together drayage assignment, appointment times, amendment management, invoicing, visibility, rates, optimization, and business intelligence, while coordinating resources in the IAS transportation network to improve profitability, customer service, and equipment utilization.
